1.

(Cut out one side of the tire walls.)

2.

(Stack one tire on top of another tire and make sure that they are aligned.)

3.

(Drill a hole through the tire wall where the tires touch, then connect the tires together with a bolt, nut, and washers.)

4.

Lay the tires down on a weedmat in a circular formation. If a plastic tarpaulin is used, perforate the tarpaulin to allow for water to seep through.

5.

Drill a hole through the tire treads where the tires touch, then connect the tires together with a bolt, nut, and washers.

6.

Drill a hole through the tire wall of the bottom tire. Next, stick a rebar through the hole of the tire into the ground. Then, use a hammer to bend the rebar over the side of the tire into the ground to secure the tire.

7.

Fill in the tires and the area in the center of the tires with sand.

8.

Use a utility knife to cut the weedmat around the outer tires in a similar shape to the tire formation.

This element does not require soft fall material and can overlap with other elements. Please refer to the Playground Ideas Safety Handbook.
